# AI Code Review Audit Report

Project: **rock-paper-scisors** • Languages: Markdown, Python, HTML, JSON, CSS, JavaScript

GROUNDED HEALTH SCORE

**85** / 100

## SUMMARY

The project contains critical security vulnerabilities including hardcoded secrets and sensitive data storage in localStorage. There are significant bugs in the frontend state management (stale closures, direct mutation) and backend database handling (missing connection cleanup). The code lacks error handling and proper resource management.

**Verdict: Analysis complete. Review findings above for recommended corrections.**

## Detailed Findings (1 issues)

### Stale Closure in Timer Effect

BUG • HIGH

Location: `frontend\\src\\App.jsx` (Line 23)

React state updates are asynchronous and the closure created by setInterval does not update with the new state values. The dependency array is empty, so the effect runs once, locking in the initial state.

> **Fix:** Modify the setInterval callback to use the functional form of the state setter to ensure it always uses the latest state value.

**Before:**

```
setInterval(() => setSeconds(seconds + 1), 1000);
```

**After:**

```
setInterval(() => setSeconds(prev => prev + 1), 1000);
```
