AI Code Review Audit Report

Project: **javascripttest1** • Languages: TypeScript

GROUNDED HEALTH SCORE

85 / 100

SUMMARY

The codebase contains critical security vulnerabilities including SQL injection and OS command injection. Additionally, there is a logic bug where the SQL query is constructed but never executed, and a potential runtime error due to division by zero.

Verdict: Analysis complete. Review findings above for recommended corrections.

Detailed Findings (1 issues)

SQL Query Not Executed

BUG • HIGH

Location: `jstest1.ts` (Line 10)

The developer likely intended to query a database but mistakenly used `child_process.exec` for a ping command, leaving the SQL query unused.

> **Fix:** If the intent is to query a database, use a database library (e.g., `mysql`, `pg`) to execute the query. If the intent is to ping, remove the SQL query.

Before:

```
const query = "SELECT * FROM users WHERE username = '" + username + "'"; console.
```

After:

```
// Remove unused SQL query and exec call if not needed
// Or implement database query if intended
```
