AI Code Review Audit Report

Project: **pythontest1** • Languages: Python

GROUNDED HEALTH SCORE

75 / 100

SUMMARY

The codebase contains a critical runtime error (ZeroDivisionError) and two high-severity security vulnerabilities (SQL Injection and Command Injection). Additionally, there are code quality issues regarding resource management (unclosed database connections) and lack of input validation.

Verdict: Analysis complete. Review findings above for recommended corrections.

Detailed Findings (1 issues)

ZeroDivisionError in calculate_average

BUG • CRITICAL

Location: `pythontest1.py` (Line 5)

When `numbers` is an empty list, `len(numbers)` is 0, causing a ZeroDivisionError.

> **Fix:** Return 0 or raise a specific exception if the list is empty.

Before:

```
def calculate_average(numbers):
    return sum(numbers) / len(numbers)
```

After:

```
def calculate_average(numbers):
    if not numbers:
        return 0
    return sum(numbers) / len(numbers)
```
