AI Code Review Audit Report

Project: **rock-paper-scisors** • Languages: Markdown, Python, HTML, JSON, CSS, JavaScript

GROUNDED HEALTH SCORE

85 / 100

SUMMARY

The project contains critical security vulnerabilities including hardcoded credentials and client-side secret storage. There are significant bugs in the React frontend involving state mutation, stale closures, and missing effect cleanup. The backend lacks input validation and proper database connection management.

Verdict: Analysis complete. Review findings above for recommended corrections.

Detailed Findings (1 issues)

Direct State Mutation in React

BUG • HIGH

Location: `frontend\src\App.jsx` (Line 39)

Since the object reference remains identical, React's shallow comparison determines the state has not changed, preventing the UI from updating with the new score.

> **Fix:** Replace `score[data.result + "s"]++; setScore(score);` with `setScore(prev => ({ ...prev, [data.result + "s"]: prev[data.result + "s"] + 1 }));`.

Before:

```
score[data.result + "s"]++;
setScore(score);
```

After:

```
setScore(prev => ({ ...prev, [data.result + "s"]: prev[data.result + "s"] + 1 }));
```
