AI Code Review Audit Report

Project: **javascripttest1** • Languages: TypeScript

GROUNDED HEALTH SCORE

85 / 100

SUMMARY

The codebase contains critical security vulnerabilities including SQL injection and OS command injection. Additionally, there are logic errors where the SQL query is constructed but never executed, and a potential runtime error due to division by zero. The code lacks input validation and proper error handling.

Verdict: Analysis complete. Review findings above for recommended corrections.

Detailed Findings (1 issues)

SQL Query Not Executed

BUG • HIGH

Location: `jstest1.ts` (Line 10)

The code builds a string but lacks a database driver call (e.g., mysql.query, pg.query) to actually run the query. The response is instead handled by the `exec` call below.

> **Fix:** Use a database library like `mysql2` or `pg` and execute the query with placeholders to prevent injection and actually retrieve data.

Before:

```
const query = "SELECT * FROM users WHERE username = '" + username + "'"; console.
```

After:

```
const query = "SELECT * FROM users WHERE username = ?"; db.query(query, [username], (err, r
```
